- **Gratins**
*Frozen homemade gratin will appear differently when cooked based on the amount prepared and the container it is in. Please keep an eye on it as it cooks.
*For store-bought items, please see the  mark below.

Types of Fish

- **Fish Fillets**
(Meunière style, Fried with butter, etc.)

Types of Vegetables

- **Cut vegetables into bite size pieces (Store-bought pre-cut vegetables can be used).**
When dealing with thin vegetables (mushrooms, bean sprouts, etc.) and green vegetables (broccoli, asparagus, shishito peppers), if you cut them small or thinly, in order to avoid them burnt, so wrap them in aluminum foil.

Ready-Made

- **Gyoza (Japanese Dumplings)**
Wrap Gyoza in aluminum foil after dipping in water. Line the baking tray with baking paper for an easier time removing them.
*It is not recommended to make gyoza with wings nor use the mix (usually included) to create them, as they will not cook as desired.
*This oven cannot cook handmade gyoza.

Seasoning

- You may use seasonings and store-bought flavoring to cook.

Placement

- Place main dishes (meat, fish) in the center with vegetables surrounding it on the sides.

Hard boiled eggs can be cooked. Wrap them in aluminum foil to avoid cracking.
(See Page 18)

Arrange so they do not overlap.

Wrap green vegetables and other vegetables that will easily burn in aluminum foil.

 **Idea!**

Put the sauce in a heat-resistant container and place it on the baking tray to heat it up at the same time with your meal. It's really convenient when the sauce is already warm.

Line with aluminum foil or baking paper in order to clean up easier.

Tips

- The final dish can greatly vary on the types and conditions of ingredients as well as the cook.
- If you want to cook a certain ingredient further after cooking, turn the Knob to add time and press **START** within 1 minute (well cooked food should be removed)
- When using the manual cook setting, place your dish on the upper position, select "WATER OVEN 2, 1 tray, No preheat at 250°C. Cook while keeping an eye on the dish.
- For store-bought pizza, it can be cooked using the manual cooking setting. Simply place it on the baking tray. (See Page 75)

Helpful Tips

Check the cooking instructions of each recipe if you need water or pre-heating or not.
(When you see this mark , it means to use water when cooking.)

<<How to Tell the Difference>> * When using the automatic cooking function, each dish will have a different cooking setting.

When You Want to Reduce the Amount of Oil Used

(Ex) Chicken with Teriyaki Sauce

- Use either the Water Grill cooking setting or the Water Oven cooking setting without preheating.
- Use the Superheated Steam setting on high to quickly reduce excess fat from the ingredients of the dish.

When You Want to Quickly Cook Something that is Raw

(Ex) Baked Sweet Potato

- Use either the Water Grill cooking setting or the Water Oven cooking setting without preheating.
- Use the Superheated Steam setting on high to speedily cook the dish all the way through.

Deep Fried Chicken

(Ex) Deep Fried Chicken (Boneless Chicken Thigh)

- Use the Water Oven cooking setting to efficiently reduce fat from the meat.

Frying

(Ex) Croquettes, Fried Sardines

- When raw ingredients give off water, use the regular oven function to cook in order to become sticky. (Do not use water)

Warning ● "Tempura" cannot be fried in this oven.

Spring Rolls

(Ex) Spring Rolls

- Use the Water Oven function of high-energy.
- Coat the rolls all over with oil before cooking.

Important Points

→ Dishes can be cooked manually as you like.

If you expect get more finished color with your dish, and are not concerned with reducing the oil content, use the Grill setting to cook (without water). In the event you do use this setting, reduce the cooking times listed under each dish in this cook book by 10-20 percent to cook manually.

→ We recommend lining the baking tray with aluminum foil or baking paper in order to make clean up easier.

Be aware when lining the baking tray that your foil or paper does not stick out from the edges. When using the rack, use the legs to hold the aluminum foil or baking paper down.

"Frequently Asked Questions" about Frying

- A. The ingredients which are coated with ready-made white breadcrumb cannot be cooked. Please use "the golden-brown bread crumbs" explained on page 40. (Both ready-made white bread crumbs and vegetable oil cannot brown on top of the dish evenly.)

Q3. Can frozen items be cooked?

- A. • When you cook from the seasoned frozen meat from your own kitchen, please refer to the recipe of **Deep Fried Chicken (Boneless Chicken Thigh)** on page 39.
- When you want to reheat the fried cooked foods from outside, **1 CRISPY REHEAT** (Operation Manual Page 34) is helpful.

Tips for “Grilled Fish”

Helpful Tips

Check the cooking instructions of each recipe if you need water or pre-heating or not. (When you see this mark , it means to use water when cooking)

<<How to Tell the Difference>> * When using the automatic cooking function, each dish will have a different cooking setting.

Grilled Sauce & Miso Marinated Dishes

(Ex) Grilled Yellowtail with Teriyaki Sauce, Grilled Japanese Spanish Mackerel with Miso Marinade

- GRILL without preheating.
- If you use the WATER GRILL setting when cooking with these, the steam will thin the sauce/marinade. Thus, the GRILL setting is used (No water needed).

Fish cooked using the Water Grill setting will produce an overall softer flavor and color compared to cooking with the Grill setting.

Salt-Grilled Dishes

- Use the WATER GRILL setting with preheat.

Important Tips

→ Dishes can be cooked manually as you like.

If the main goal is to produce a nice golden-brown color when done, and not reduce salt or oil content, cook using the Grill setting. By preheating the oven, the color will be even richer. (No water needed)

→ Depending on fat content of the fish, the degree of brown will vary. If you want more brown color, then extend the cooking time for 4-5 minutes and keep an eye on it.

* Depending on the degree of freshness, the skin may break and the finished condition will vary.

→ Grilling Frozen fishes **without Defrosting**

For frozen Salt-Grilled Fish Fillets*, Fish Fillets that are less than 150g*, and Sun-Dried Fish, they can be grilled as is. They are cooked by the same following the same instructions for raw fish. If the finished color isn't satisfactory, simply extend the cooking time with the **EXTEND** function.

*For Frozen Fish, use the **AUTO SENSOR COOK FROZEN INGREDIENTS GRILL** Setting.

*Please see "How to Freeze Salt-Grilled Fish" on page 45 for more information on freezing.

→ We recommend lining the Baking tray with aluminum foil or baking paper in order to make cleanup easier.

*Be mindful when lining the Baking tray that your foil or paper does not stick out from the edges. When using the rack, use the legs to hold the aluminum foil or baking paper down.

→ What to do with other fillet not mentioned in this cook book:

Please read through the "Helpful Tips" section in order to look for the close grilled fish dish. Low-fat cuts of fish are best cooked with the Grill setting.

Tips for Salt-Grilling Fish

- The final color will vary on the fat content of the fish. When cooking with a fish with low-fat content, coat both sides with a sugar-salt mixture.
- How to make a sugar-salt mixture: about 20% of the mixture should be sugar. The remainder 80% can be salt. Using this will increase the umami flavor and turn the fish a nice golden-brown color.
- The moisture pulled out by the salting will also start to bring out the smells of the fish, so use a paper towel to wipe it off.

Grilling Frozen fishes without Defrosting

- How to Freeze Salt-Grilled Fish
 Coat the fillet with salt, let sit for about 10 minutes, quickly rinse the fillets and then remove excess moisture. Let the fillets sit for 20 to 30 minutes after this to absorb the salt originally sprinkled on it. Finally, lay the fillets flat inside of a freezer bag taking care to make sure they do not overlap.
- Cook the frozen fishes with the same steps 3-5 above. If the fish aren't golden brown enough, please extend the cooking time.

Tips for the "Steamd Dish / Simmered Dish"

Helpful Points for Steaming

- For the Steam High setting, dishes can be cooked up to around 100°C using steam. Enjoy using this realistic steam cooking setting without the need for a steamer.
- By letting the oven permeate with steam and reduce the oxygen content, food doesn't oxidize as much, allowing vegetables to maintain their important nutrients.
- Items normally prohibited when using the microwave function can be used when steaming.
Eggs can be left inside the shell and food in retort packaging can also be left inside. Vegetables can be steamed using the metal fine hole colander.

Warning Please do not try to boil eggs, cook retort packaged food, or use the metal accessories with the microwave function.

- If the cooking times are the same, different dishes (vegetables & eggs, spaghetti & sauce) can be cooked at the same time with this oven, saving you time.

Ex: Mimosa Salad (Page 47)
& Spaghetti with Store-Bought Sauce (Page 57)

- When cooking with the Steam setting, please refrain from opening the oven door as opening it will allow steam to escape and the dish may not cook all the way through.

Helpful Points for Simmering

- Simmered dishes are cooked using the Superheated Steam setting. Use the Water Oven setting with a heat-resistant container and a lid (made of aluminum foil, etc.).

(Refer to "Convection/Grill" on Page 29 of the Operation Manual)

*It's easier to cook by using a metal bowl as pictured on the right.

*In the event that an aluminum foil lid is being used, be sure to close the edges tightly.

*When done, be careful when removing the lid (aluminum foil, etc.) as the steam may cause burns.

Create a drop lid with the baking paper and then cover with an aluminum foil lid.

- Using baking paper to make a drop lid is recommended as this makes it easier to cook the dish. In the event that you don't have any, a heat-resistant plate may be used, but due to it being more difficult for heat to pass through the plate, there may be parts that aren't cooked fully. In the event of this, please extend the cooking time as necessary.

- When cooking a dish that releases large amounts of juice, please use a deep, heat-resistant container to cook with to prevent the container from boiling over.

Tips for Spaghetti & Sauce

- Use a store-bought container designed for boiling pasta noodles in the microwave. It should be approx. 27cmx9cmx6cm.
- When boiling spaghetti, vegetable oil is added to make the spaghetti noodles not stick together.
- By cooking the pasta in this oven, it will have a slightly less-chewy texture when done. Furthermore, the final product will vary based on the maker of the noodles and the size of the dish used to cook them in. If the noodles are too hard, extend the cooking time and keep an eye on it.

Tips for "Making Sweets"

● Prepare thoabout

- First, properly measure ingredients and arrange utensils.
- Inconsistencies can occur when measuring flour with a measuring cup. Please measure with a scale.

● Make sure bowls and whisks are free of moisture and oil.

- It makes beating eggs difficult.

Whipping eggs is manual work. It is convenient if you have a hand mixer.

● Froth will disappear if too much time passes after beating the eggs, so please work quickly.

Warning Beating the whole egg and sugar together has less of a tendency to froth compared to beating only the white. Please be careful as mistakes easily arise when cooking with insufficient froth.

● Use butter with or without salt to your liking.

● Properly divide and sift weak and strong flours.

- Lighten the baking by removing clumps and adding plenty of air to the dough.

● Arrange the dough with spaces in between.

- They expand when heated, so make sure there is plenty of space. Enough space is necessary because the dough is more likely to expand with heating.

● For Baking

- Cookies and cream puffs can result in uneven baking if the thickness of the dough is not consistent. Please make the sizes and quantities uniform.

● Results will vary on the quality of the materials.

- Metal pans are mainly used in this cookbook. You may use paper or silicon pans, but please watch as you bake after confirming the heat-resistant temperature. (See operation manual page 29) Also, utensils made of heat-resist glass are slower to heat up when compared to those made of metal, which will yield different results.

● When using recipes not found in this book

- When using recipes found in other books on the market, please cook while using a similar recipe from the cookbook menu as a reference. However, note that it may not be possible to cook under the same conditions found in other books, as the size and construction of the oven will differ, giving different heating times and temperatures.

- Can automatically bake with 15cm or 21cm diameter.
- Properly adjust settings for 15cm or 21cm diameter.

Adjustments should be made within 30 seconds of setting to **13 SPONGE CAKE** and start cooking.

Baking Paper

1 Apply a thin layer of butter (not from ingredients) on the inside of a circular pan and lay out a baking paper. Separate the egg whites from the yolk.

2 Put the egg whites in a large bowl, and beat until it forms a point. Slowly add half of the sugar and continue beating.

<Important Point>

The point is to have the egg whites & yolks beaten. Please do so thoabout.

3 Add the the sugar to the yolks, and warm both with hot water. Remove when it reaches body temperature and beat until white and lines start to appear (mayonnaise consistency).

4 Combine the egg whites with the yolks, add vanilla extract, and mix with a whisk until smooth.

5 Sift cake flour into the step 4. Mix by lifting from the bottom gently not to damage the froth until the flour disappears.

<Important Point>

If It is not mixed well enough, the texture will be coarse. If it is mixed too much, it will not rise well.

6 Cut butter into small pieces and put in a heat-resistant container with milk. Place the plastic wrap on top of the container, and place in **the center of the oven**. (Do not insert either Baking tray).

In doing so, as a guideline, move the spatula a little and mix it swiftly so that the powder does not disappear, and if you scoop up the batter with a spatula, it falls like a ribbon, leaving marks for a while.

*Compared to

sponge cake, roll cake has a lower cake flour to egg ratio. The texture will be coarse. If scarce flour is used. Also but be careful of the dough becoming sticky.

Quickly add vanilla extract and milk, then mix.

7 Pour the batter into the Baking tray from step 1, smoothing out the surface and removing air.

11 Turn the cake over, removing the baking paper. Turn it back over again, placing it on the baking paper, spread on cream and roll.

*If you are worried about the hardness of the outer circumference, touching the hard parts with a damp cloth will make it easier to roll.

*By diagonally cutting the cake at the end of the roll by 1cm it will rest nicely with no overlap at the edge.

12 After it is rolled, wrap it in baking paper, and further wrap in plastic. Place the rolled end down in a refrigerated room and let it adjust for about 30 minutes.

Tips for "baking bread"

●Ingredients

- Properly measure ingredients
- Inconsistencies can occur when measuring flour with a measuring cup. Please measure with a scale.
- Use dry yeast that doesn't require pre-fermentation. After opening, remove air from package, fold the opening, close it with tape, then store in the refrigerator. Be sure to use quickly. If it is not stored properly or gets old, the bread will not properly rise.

●Adjust proof (fermentation) based on the situation

- Time required for fermentation differs depending on things like moisture in the room, temperature of the dough, and vitality of the yeast.

Fermentation has a setting for consistent steam **19 STEAM PROOF** and no steam **20 PROOF**.

Steam proof can be done at 35, 40, or 45°C and proof can be done at 30, 35, 40, or 45°C.

●Be careful of the dough drying out.

- At bench time, wrap the dough as not to let it dry. If you're worried about the dough drying out during secondary fermentation, mist it several times.

●Make space when arranging

- After secondary fermentation, the dough expands 2 to 2.5 times its size.

●Gently spread dorure with a soft brush.

●For Baking

- If the size of the batter of something like a dinner rolls is different, it can cause uneven baking. Make sure the sizes are uniform.

●For the best flavor:

- After baking slightly cool. When temperature gets down around body temperature put in a plastic bag to prevent from drying.

Short Memo

- Simple breads like French breads with lower sugar and fat content are called "lean breads". Conversely, breads like dinner rolls which are prepared with plenty of sugar and butter are called "rich breads". For bread, French bread has a high learning curve and is meant for advanced bakers. It is easy for various influences such as measurements and room temperature to get in the way. Please master these tricks by rising to the challenge many times.

Tips for Baking French Bread (Baguette)

Ingredients

- If you do not have flour specifically for baking French bread, it can be created by making a flour mixture that is 8 parts strong flour and 2 parts cake flour and is the measurement indicated in the recipe.
- After kneading the dough, use cold water in order to prevent the dough from reaching room temperature. When cooking in summer, prepare everything in a cool room and use chilled ingredients.

Fermentation & What to Watch For

- Ferment the dough in a slightly cool room. The ideal temperature is about 20-30°C
- The dough will expand to 2-2.5 times its size after the first fermentation. If a hole remains after putting flour on your finger and pressing the center, It is properly fermented. If the hole closes up, It is not fermented enough. While keeping an eye on its condition, add around 10 more minutes of fermentation time.

Handling the Dough

- French bread is one of the sensitive types of bread and do not touch the bread dough too much to avoid damaging the dough and uneven browning finish.
- Cover the dough from drying during the time of first fermentation and raising.

Baking

- The way to ensure that your bread has that unique French bread crisp and sheen is to make sure that there is hot steam in your oven.

Cautions when making pizza

- Cut baking papers so they will not fall off the Baking trays. They can burn if they touch the sides of the oven or are cooked too long.
- After preheating, the Baking trays are hot, so use a mitten when removing them and place them somewhere resistant to heat. (Be careful of burning yourself).

- 1 Put water in the water tank.
(Water for both fermentation and baking)
- 2 Do as instructed in steps 2–5 of the dinner roll recipe (page 71) with the ingredients list.
- 3 Follow steps 6–8 of the dinner roll recipe for primary fermentation, cut into 2 pieces with a scraper or kitchen knife, wrap and let rest for about 10 minutes. (Bench time)
- 4 Insert Baking trays and preheat. (Do not put any food products in)
