**A Renowned Technology
In Keeping Your Food Free From Contamination
And Saving Energy Consumption**

Food contamination and energy consumption are the two issues that we are concern about. Protect your loved ones and save money with Sharp J-Tech refrigerator. This advanced technology helps in eliminating harmful bacteria and mold in your refrigerator while saving 77%* of energy. Sharp J-Tech, saves and protects.

SAVES

Saves More Energy & Money

J-TECH INVERTER

**36
GRADUAL
STEPS**

Gradual Steps Consume Least Amount Of Energy And Saves Cost

**HIGH & LOW
ROTATION**

Saves Energy By Maintaining The Optimum Temperature

*Based on SIRIM test model SJ364E

Innovative Technology That Saves Energy

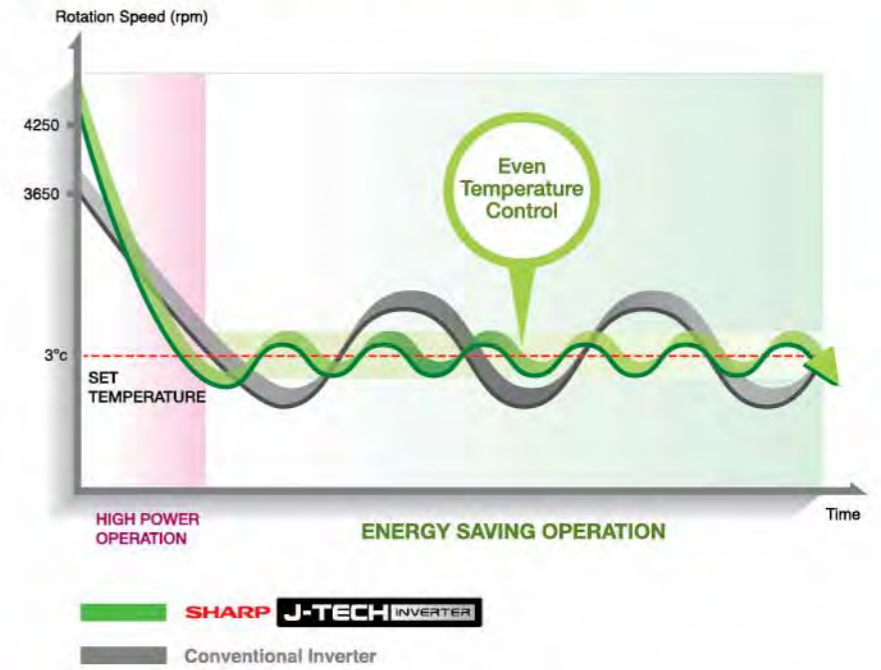

J-TECH INVERTER

J-Tech Inverter saves energy up to 77%* compared to conventional inverter which only saves up to 50%. J-Tech saves more energy and money.

Comparison Between J-Tech Inverter And Conventional Inverter

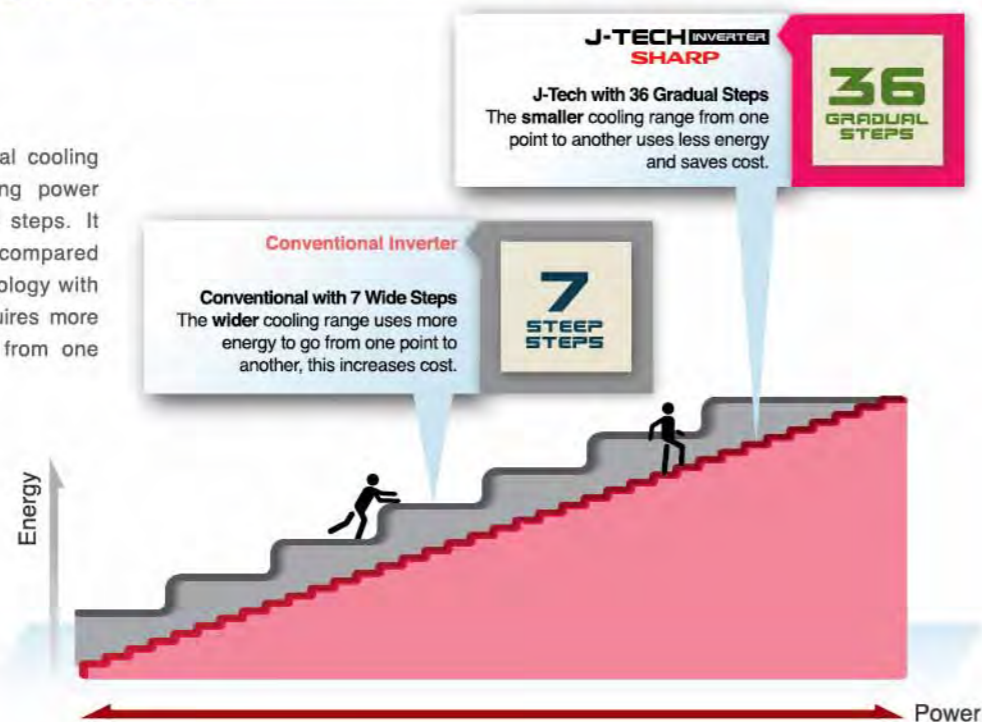

The set temperature for J-Tech Inverter refrigerator does not go very high or drop to very low. It keeps the temperature fluctuation to a minimal point. Whereas for the conventional inverter, the set temperature goes very high and very low consuming more energy compared to J-Tech Inverter which minimises electricity consumption.

*Based on SIRIM test model SJ364E

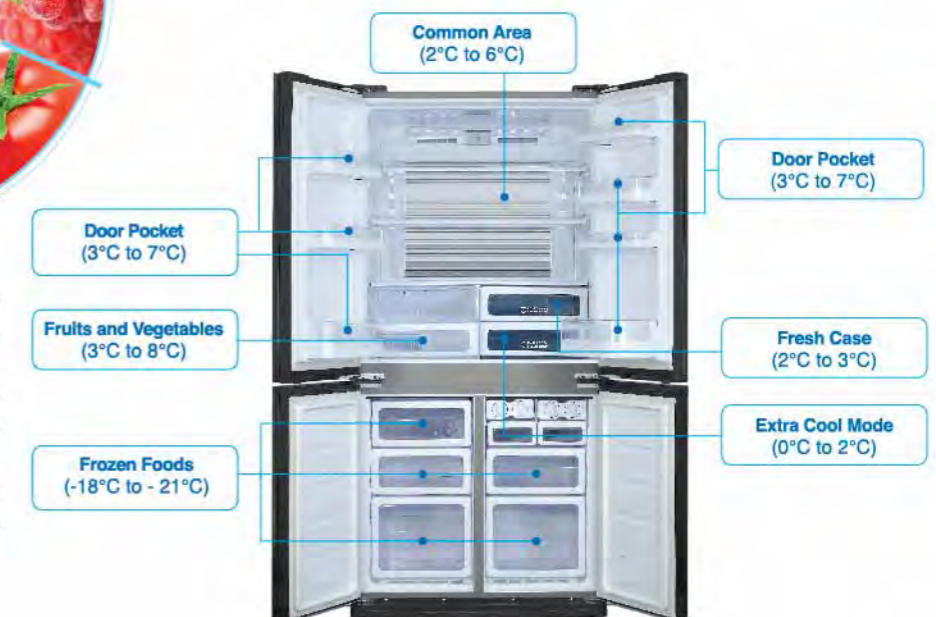

36 GRADUAL STEPS Gradual Steps Consume Least Amount Of Energy And Saves Cost

J-Tech Inverter has 36 gradual cooling steps which adjust its cooling power gradually in between the 36 steps. It saves more energy and cost compared to conventional inverter technology with only 7 steep steps which requires more energy consumption to move from one step to another.

Keeps Food At The Right Temperature

Sharp J-Tech refrigerators allow you to store your food at its ideal cooling temperature. Each of its compartments operates in different temperature that is most suitable for all your food. Food that is kept at the precised temperature minimises bacteria growth and food spoilage yet preserving its freshness longer.

SAVES

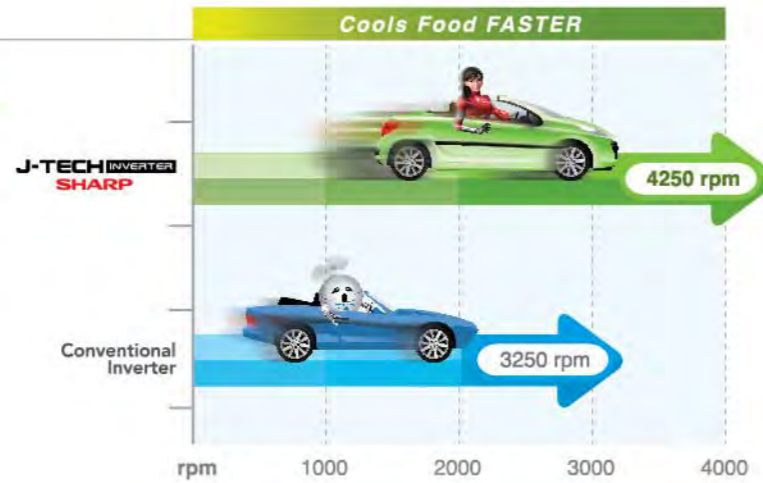

HIGH & LOW ROTATION

Optimising Cooling Efficiency While Saving Energy

HIGH ROTATION

Cools Food In A Quickest Time, Saves Energy And Preserves Freshness

J-Tech Inverter's high rotation speed of 4250rpm cools food in the shortest period of time while saving energy. Whereas, conventional inverter with 3250rpm takes a longer time to cool and consumes more energy.

LOW ROTATION

Goes On Low Rotation Speed When Refrigerator Is Less Frequently Used

J-Tech Inverter saves energy by maintaining low rotation speed of 1200rpm (without affecting your food freshness) when the refrigerator is least used. Conventional inverter goes on slightly higher rotation speed of 1300rpm compared to J-Tech. It uses more energy when the refrigerator is idle.

LOW NOISE & VIBRATION

Quiet Operation

This feature reduces operational noise by 50%* (2.9dB) and vibration by 30%* compared to conventional models.

7 SHIELDS PROTECTION

Complete Protection For Your Refrigerator

Plasmacluster Ion Technology

Keeps Food Free From Contamination

As your refrigerator is frequently opened and closed, your foodstuffs are exposed to contaminants. Therefore, Plasmacluster Ion Technology eliminates contaminants like bacteria and mold by releasing positive and negative ions in the refrigerator to keep your food free from microbes and stay fresh longer.

Protects From Bacteria And Mold

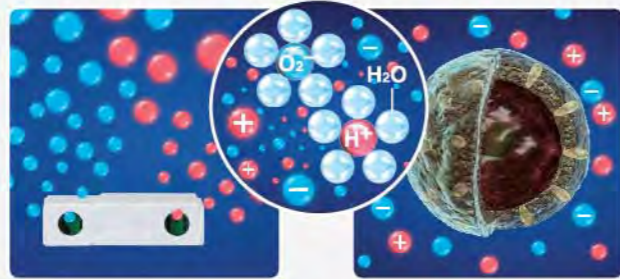

Sharp J-Tech with renowned Plasmacluster Ion Technology, protects your food from bacteria and mold. This technology keeps your food fresh longer by eliminating 99% of bacteria and 97% of mold in your refrigerator.

HOW DOES PLASMACLUSTER MECHANISM REMOVES MICROBES

The ions are long-lasting* because they are surrounded by water molecules.

Plasmacluster ions are generated by plasma discharge and released into the air.

1 IONS ARE RELEASED.

*Verified in Sharp test comparisons of ions not surrounded by water molecules.

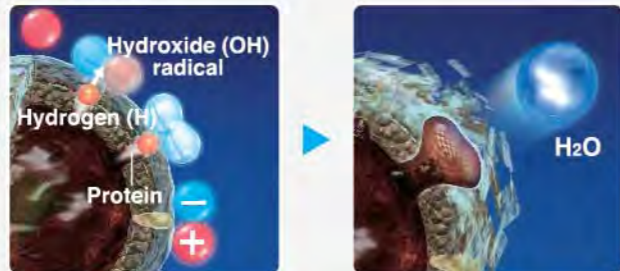

2 THE IONS ACT ON AIRBORNE BACTERIA AND MOLD.

The ions from hydroxide (OH) radicals are highly oxidising when they adhere to the surfaces of mold and bacteria. They instantly remove the hydrogen from the protein's surface breaking them down.

3 THE BROKEN-DOWN COMPONENTS RETURN TO THE AIR AS WATER.

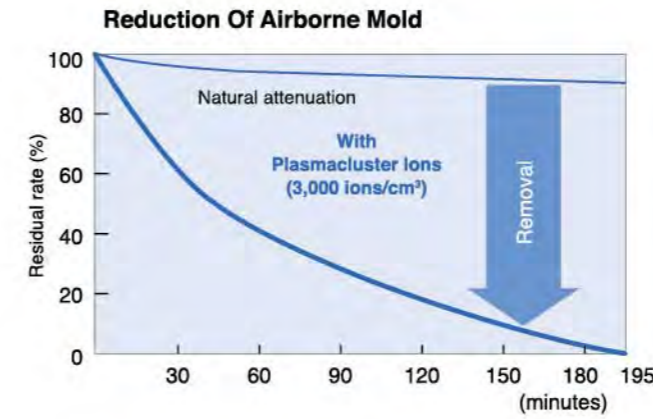

The hydroxide (OH) radicals combine with hydrogen (H) to form water (H₂O), which returns to the air.

* Refrigerators with Plasmacluster Ion Technology prevent the action, as well as reducing the effects of suspended airborne mold and bacteria by breaking them down.
 • Plasmacluster Ion Technology cannot create a completely sterile environment or ensure prevention of infection.

Removal of Mold**

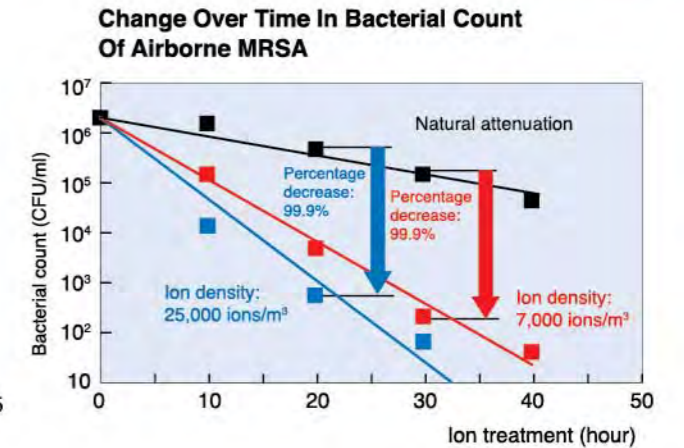

ELIMINATES 97% AIRBORNE MOLD

**Tested by Ishikawa Health Services Association

Removal of Bacteria***

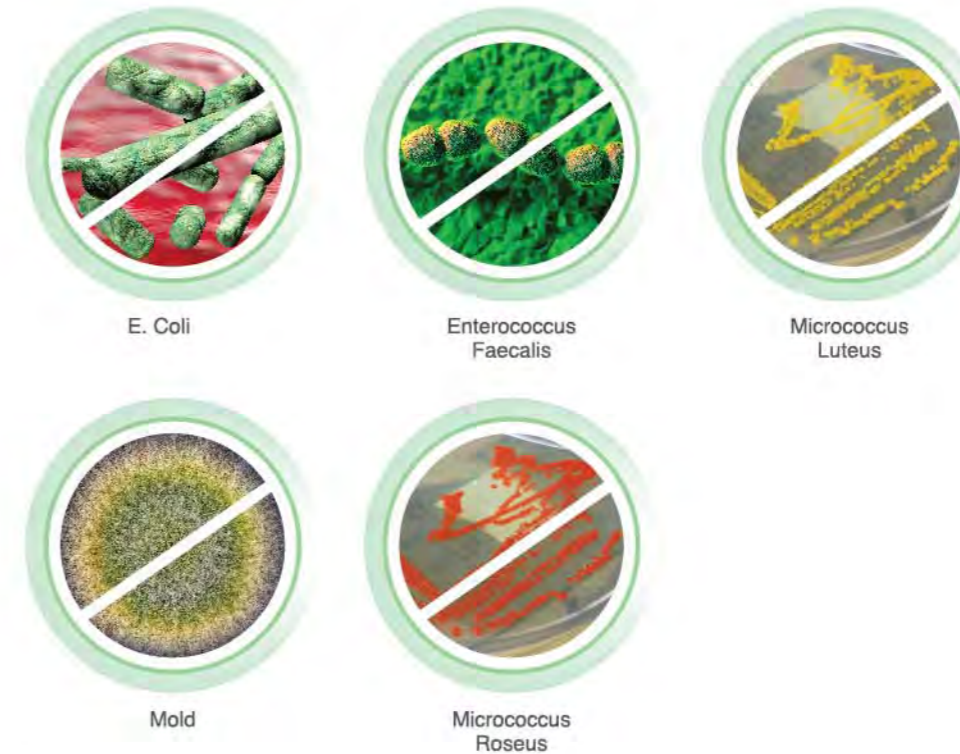

ELIMINATES 99% AIRBORNE BACTERIA

***Tested by Kitasato Institute Medical Centre Hospital, Research Division

The Effectiveness Of Plasmacluster Ion Technology****

Besides frequent opening and closing of your refrigerator's door, the food that are brought from outside into the refrigerator are already exposed to harmful bacteria. This could cause cross contamination to the rest of your food in the refrigerator. Plasmacluster Ion Technology, eliminates harmful bacteria like E.Coli, Micrococcus Luteus, Micrococcus Roseus, Enterococcus Faecalis and Mold that cause food poisoning.

****Research conducted by University of Applied Sciences Aachen, Germany, Kitasato Research Center of Environmental Sciences, Japan and Ishikawa Health Service Association, Japan.

PROTECTS

AG CU Nano Deodoriser

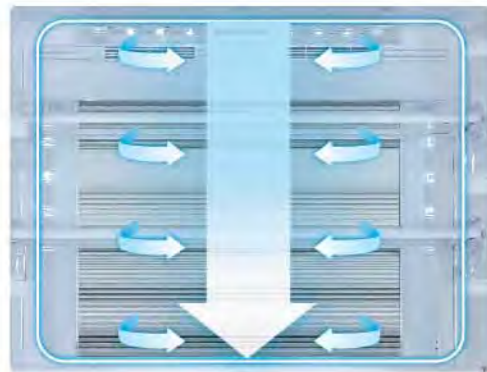

Help Reduce Odours

AG CU Nano Deodoriser is placed in the back of the refrigerator compartment to reduce both bacteria and odours. When air passes through the filter, the molecules that create smells are oxidised and broken down.

ActiFresh HYBRID COOLING TECHNOLOGY

Keeps Food Fresh Longer

ActiFresh Hybrid Cooling Technology is a combination of direct cooling system and fan cooling system. It provides even and fast cooling, at the same time maintaining the healthy moisture level preventing excessive dryness. The rear aluminium panel inside is cooled to approximately 0°C, and extremely humid chilled air is spread throughout the compartment to keep food fresh.

Complete Protection For Your Refrigerator

7 SHIELDS PROTECTION

Sharp's 7 shields protection, protects your refrigerator from instability, insulation, lightning, fire, excess voltage, vibration and also rats.

- Stability**
Sturdy base tested to 10 degrees tilt.
- Lightning**
Power board is protected from power surge with varistors.
- Voltage**
Stable operation in wide voltage range (99-264V).
- Rat**
Anti-rat protection on electrical wires.

- Insulation**
High safety compliance design protects users from electric shock.
- Fire**
Power board is enclosed by fire-retardant material.
- Vibration**
Ensures the quality of SHARP refrigerator will not be affected by even the roughest handling during delivery.

INNOVATIVE FEATURES

INTELLIGENT MODE INDICATOR

Blue, Green, Orange The Intelligent Colours that Maintains Freshness

The elegantly designed refrigerator handle, displays the status of refrigerator with 3 different colours. These intelligent colours make it easy for you to observe the status of refrigerator from outside without opening the doors.

- Plasmacluster Ion Mode ON**
 Indicates Plasmacluster Ion Mode. Keeping your food free from mold and bacteria and also maintain them fresh longer.
- Eco Mode ON**
 Indicates Eco Mode. Energy saving feature that reduces electricity consumption by 10%.
- Temperature Increase Sign ON**
 Indicates the temperature increase in the refrigerator. A warning sign informing you to check on it.

TOUCH CONTROL DOOR PANEL

Control at Your Fingertips

The stylish touch panel allows you to control the temperature, switch modes according to your preference and monitor the status of ice making. It also allows you to monitor the water level and its self-cleaning mode from outside without opening the refrigerator's door. Designed to prevent temperature fluctuation and preserve food freshness.

Features Mode :

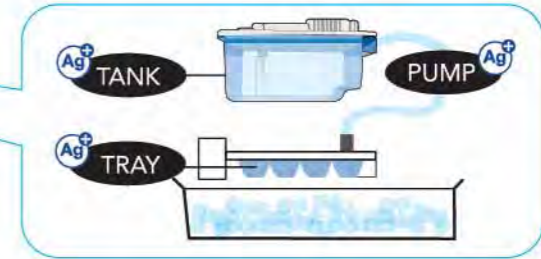

- | | | | |
|----------------------------|--------------------------------|-------------------------|------------------|
| Child Lock Mode | Express Freeze Mode | Crystal Cube Selector | Navigation Key |
| Vacation Mode | Eco Mode | Ice Maker Cleaning Mode | Setting Selector |
| Plasmacluster Mode | Regular/Large Ice Cube Setting | Process Indicator | Confirm Mode |
| High Temperature Indicator | | | |

AUTO CRYSTAL CLEAR ICE CUBE MAKER

Hassle Free Ice Making Process

This technology offers hassle-free ice making process where you just need to fill up water in the water tank and the refrigerator makes the ice cubes for you automatically!

Self-Cleaning System with AG+ Ion

The Ice Making System consists of water tank, pump and tray which are all coated with AG+ Antibacterial Ions, so it doesn't require any maintenance. Cleaning also made easy with a touch of the Ice Maker Cleaning Mode which only takes 40 seconds.

LED-Status of Ice Making

You can choose the type of ice cubes you want from the touch panel without opening the door. Monitor the ice making process by observing it at the touch panel.

Four Types of Ice Cubes

Crystal Clear Ice Cube		Normal Ice Cube	
Large (2.3x bigger)	Regular	Large (2.3x bigger)	Regular

Forming crystal clear ice cubes that are all ice, with less air bubbles trapped inside them that make them look cloudy. Avance Crystal Clear Ice Cube Maker removes all the trapped air to produce solid ice cubes that are slower to melt. Your drink remains ice-cold longer.

INNOVATIVE FEATURES

Besides J-Tech Inverter and Plasmacluster Ion Technology, Sharp refrigerator holds an array of other innovative features to keep your food fresh longer, conveniently.

EXTERNAL DOOR CONTROL PANEL

Control Your Settings Without Opening Its Door

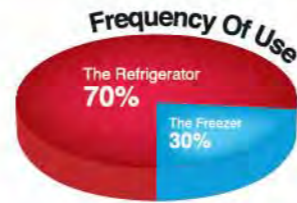

Innovative control panel, positioned elegantly on the door handle allowing you to adjust temperature and other settings from outside without opening the refrigerator's door. It prevents the escape of chilled air and saves energy.

BOTTOM FREEZER

Less Bending And Easy Access To Fridge Compartment

In a recent study conducted by Sharp, the main fridge compartment is opened 70% of the time in a single day. With the freezer re-located at the bottom, the fridge compartment is now easily accessible. So, you can conveniently put in and remove items from the fridge compartment without having to bend down every time.

4 DOOR CONVENIENCE

Easy Access To The Preferred Compartment, Retains Food Freshness

Four doors occupy less space when opened, while the interior remains wide enough to accept extra-large food items. By opening just one door, the escape of chilled air is minimised, thus retaining the freshness of the food and also saving on energy. Besides that, four doors are also light weight and easier to open compared to two doors which are much heavier.

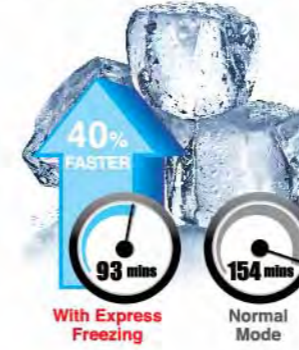

Four Door Refrigerator
Less chilled air escapes, keeps food fresh and minimises food spoilage

EXPRESS FREEZING

Makes Ice Cubes Within Minutes

Express freezing makes ice cubes for you within 93 minutes which is 40% faster compared to conventional models.

Clear Visibility With Brighter Interior

Beautifully illuminated spacious interior, defines the elegance of the refrigerator and a clear visibility in reaching your food.

Easy Storage For Your Wide Items Up To 78cm

Unlike side-by-side refrigerators, the unique Double French Refrigerator lets you store bigger items easily in its huge, non-compartmentalised pillarless fridge section.

EXTRA COOL

Savour Your Every Sip

Enjoy sipping your favourite carbonated cool drink at 0°C - 2°C. When your carbonated drink is kept in a lower temperature, the bubbles in the drink will be smaller and finer which makes it easier to drink, compared to 3°C - 5°C in conventional models.

ECO MODE

Saves Energy By Extra 10%*

Energy saving feature that reduces electricity consumption by 10%.

**SPACIOUS INTERIOR,
ALLOWS YOU TO STORE
ALL YOUR BIG AND SMALL
FOOD ITEMS CONVENIENTLY.**

Sharp's Side by Side refrigerator provides an enormous interior space to keep all your food items. No matter big or small is your item, you have the space for them to stay fresh longer.

INTELLIGENT COOLING SYSTEM

INVERTER

Intelligent Cooling System controls the high-performance inverter compressor according to conditions in the refrigerator. Furthermore, it allows low-speed, energy-saving operation and efficient heat dispersion. This system reduces energy waste and enables significant energy savings.

ICE & WATER DISPENSER

Fully automatic Ice and Water Dispenser allows you to savour cold refreshments anytime of the day. Choose cold water or ice cubes by simply pressing the button on the control panel.

An antibacterial air filtration system, which eliminates bacteria and reduces unpleasant odours in the refrigerator.

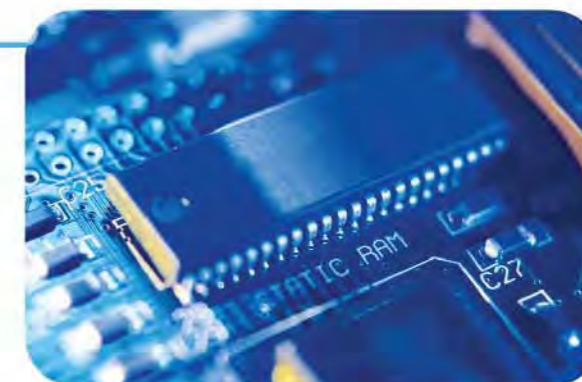

PLUMBING FREE WATER TANK

This feature does not require any plumbing installation to the water tank. Sharp's Side by Side refrigerator's water tank is maintenance free.

DIGITAL SMART CONTROL

This feature able to sense temperature change when warm food is stored in. Temperature changes are transformed into digital information to control cooling cycle and system effectively to keep the freshness of your food.

ONE TOUCH OPEN HOME BAR

Store your favourite drinks in the refrigerator and grab it through the stylish One Touch Open Home Bar. It gives the access to your favourite drink without opening the whole door.

DAIRY POCKET

A special compartment to preserve the freshness of all your dairy products, and preventing them from cross contamination.

TIPS ON SAVING ENERGY AND ENSURING REFRIGERATOR EFFICIENCY

1. Keep the ventilation space as much as possible around the refrigerator.

2. Keep your refrigerator out of direct sunlight, and do not place it next to any heat generating appliances.

3. Avoid opening the door as much as possible to minimise cold air from escaping.

4. Keep the door closed firmly. If any food falls off its shelf, it may form a gap between the body and the door.

5. Hot foods should be cooled before storing. It's because when hot and cold air combine, it will increase the temperature inside refrigerator causing food spoilage and also compressor to work more.

6. Place the food evenly on the shelves without blocking the outlet and inlet of the cool air circulation. It allows the cool air to circulate efficiently.

7. Turn on the Eco Mode when your refrigerator will not be used for a long period of time.
